

Mobile Chatbot App - Brief Project Description

The Mobile Chatbot App is an AI-powered mobile application that enables users to communicate with an intelligent virtual assistant through natural language conversations. The app provides instant responses to user queries, securely stores chat history, and offers a simple, responsive interface for Android and iOS devices. It integrates modern AI APIs with a scalable backend, user authentication, and cloud database services to deliver a fast, secure, and personalized chat experience. This project demonstrates skills in mobile app development, backend API integration, database management, authentication, and artificial intelligence.
